

Herald College, Kathmandu

Concepts and Technologies of AI

5CS037

Assignment - II - A Term Paper on Ethical and Responsible AI.

Write a Comprehensive Report on:
AI: Balancing Innovation with Ethical Integrity.

December 10, 2025

Contents

1	Assignment Details and Submission Guidelines	1
2	Assignment Overview	2
3	Division of the Task	3
4	Evaluation Criterion and Grading Rubric:	8

1 Assignment Details and Submission Guidelines

1.1 Assignment Details:

Due	Marks	Submission
January - 17	10	A report. {For details see section 5 (page no - 12).}

1.2 Plagiarism and AI Generated Content

Plagiarism of more than 20% and any AI-generated content found in the report will be reported for academic misconduct. Thus, we highly encourage you to submit your original work.

1.3 Submission Guidelines

1.3.1 Individual Work:

This assignment must be completed **individually**. Collaborative work or copying will not be accepted.

1.3.2 What to Submit?

You are required to submit the following:

1. A single **PDF file** of your final report, following the prescribed naming convention.
2. A **plagiarism report** generated from Canvas. Students must print this report and obtain their instructor's signature.

Note: A maximum similarity score of **20%** is permitted.

1.3.3 Where to Submit?

All submissions must be uploaded to the **designated portal on Canvas**, or as instructed by your module instructor.

1.3.4 Naming Convention:

Strict adherence to the naming format is compulsory. Files that do not follow the naming convention will be awarded a **mark of zero (0)**.

Format:

<StudentID>_<FullName>.pdf

Example:

00000_ABC Sharma.pdf

The Final Date for Submission is 17 Jan.

2 Assignment Overview

2.1 About Assignment:

In this assignment, you are required to prepare a comprehensive report on: “AI: Balancing Innovation with Ethical Integrity – Opportunities and Challenges.” The report should critically explore the ethical, social, and moral considerations posed by the rapid deployment of AI technologies across diverse industries and domains assigned to you by your instructor. You are expected to:

- Analyze the **transformative potential** of modern AI applications while examining the ethical constraints and risks they introduce.
- Critically evaluate key challenges related to **bias, privacy, accountability, transparency, societal impact, and fairness**.
- Investigate the **opportunities AI** presents for innovation, efficiency, and social good, while ensuring that progress does not compromise ethical standards.
- Propose **practical strategies, frameworks, or guidelines** for fostering responsible and ethical AI development, aiming to maximize benefits while minimizing harm.
- Consider both **national and international initiatives** or regulations aimed at promoting ethical AI practices.

The focus of your report should be on **rigorous analysis, critical thinking, and original insight**, highlighting how AI can serve as a tool for **equitable, sustainable, and inclusive progress** across multiple sectors, including but not limited to healthcare, education, governance, creative industries, environment, and finance.

2.2 Learning Objectives:

- Develop a critical understanding of the ethical, social, and moral challenges posed by modern AI technologies across various domains.
- Analyze the impact of AI on fairness, privacy, accountability, and societal well-being, and evaluate strategies for responsible AI deployment.
- Examine national and international initiatives and frameworks for ethical AI, and propose practical guidelines to ensure inclusive and sustainable AI development.
- Reflect on the broader implications of AI innovation for society, fostering the ability to make informed and ethically sound decisions in AI design and application.

3 Division of the Task

Your report must include, at a minimum, the following sections, each with the corresponding content and focus:

1. Title:

Provide a suitable title, as per your assigned topic.

2. Abstract (100 - 150 words):

The abstract must be fully self-contained and understandable without reading the entire paper. It should briefly state the purpose of the study, the significance of the chosen topic, the core ethical concerns explored, and the main findings or insights. Avoid citations in the abstract.

Abstract must also include "Key Words".

3. Introduction (250–300 words):

Provide a foundational understanding of why ethics in AI matters. You may consider the following guiding questions:

- What major ethical, social, and moral concerns arise from modern AI systems?
- What general ethical principles, guidelines, and regulatory frameworks exist to address these challenges?
- What key characteristics define an “ethical AI system”?
- In practice, how can developers and organizations ensure that AI systems follow ethical principles?

Your introduction should set the context and justify the importance of ethical and responsible AI.

4. Thematic Review - Key Ethical Challenges and Emerging Debates in AI (550–700 words):

You will be **assigned one of the topics below**. Provide critical analysis, real-world examples, references to research, and your own insights.

Topic Options:

1. AI Bias, Fairness, and Privacy:

- **Algorithmic Bias and Impact:** Examine how algorithmic bias emerges from training data, model design, or deployment contexts, and how these biases affect decision-making across critical

domains such as healthcare, finance, recruitment, and criminal justice. Discuss the societal and ethical consequences of biased AI decisions on marginalized or underrepresented groups.

- **Transparency, Explainability, and Accountability:** Discuss the ethical necessity of ensuring AI systems are transparent and explainable. Analyze the responsibilities of developers, organizations, and policymakers to maintain accountability for automated decisions, especially when outcomes have significant social or individual consequences.
- **Privacy and Data Governance:** Analyze the challenges of safeguarding personal data in AI-driven environments, including data collection, storage, and usage. Explore strategies for responsible data governance, privacy-by-design approaches, and adherence to regulations such as GDPR or HIPAA.

2. AI, Creativity, and the Future of Work:

- **Ethical Issues in AI-Generated Creative Content:** Assess the implications of AI-generated works in art, literature, music, and design. Discuss questions of authorship, copyright ownership, and proper attribution, highlighting ethical dilemmas when AI tools produce content independently or collaboratively with humans.
- **Employment and Workforce Implications:** Examine how AI technologies impact employment, including potential job displacement, the need for reskilling, and the creation of new roles. Discuss ethical responsibilities of organizations and governments to mitigate negative effects on the workforce.
- **Human–AI Collaboration:** Explore how AI can augment human creativity rather than replace it. Discuss the ethical considerations in designing AI tools that support collaborative innovation, ensure inclusivity, and enhance creative potential without undermining human contribution.

3. AI for Social Good and Global Impact:

- **Environmental and Sustainability Concerns:** Discuss the energy consumption, carbon footprint, and environmental impact of training and deploying large AI models. Explore the ethical responsibility of developers to consider sustainability in AI research and deployment.
- **Global Governance and Ethical Standards:** Evaluate the challenges of creating coherent international regulations and standards for ethical AI deployment, considering differences in legal frameworks, cultural norms, and technological capacities.
- **AI and Social Inequalities:** Explore how AI systems can either reduce or exacerbate existing social inequalities. Propose strategies for inclusive AI deployment that benefits marginalized communities and ensures equitable access to technology.
- **Addressing Global Challenges:** Analyze the ethical opportunities and potential risks of using AI to address pressing global issues, such as climate change, poverty alleviation, public health, and access to education. Discuss trade-offs and potential unintended consequences.

4. Large Language Models (LLMs) and Education:

- **Bias and Accuracy in Educational Content:** Examine the ethical concerns arising from LLM-

generated learning materials, including biased or inaccurate content that may affect inclusivity, diversity, and educational quality.

- **Automation of Tutoring and Feedback:** Evaluate the ethical risks of replacing or reducing human teacher involvement through AI-powered tutoring systems. Discuss potential impacts on student learning, motivation, and mentorship.
- **AI-Based Assessment and Grading:** Critically assess the fairness, transparency, and reliability of automated grading systems. Consider how algorithmic decision-making may influence student outcomes and ethical obligations to ensure accountability.

5. AI and Modern Warfare:

- **Autonomous Weapons and Accountability:** Discuss ethical dilemmas associated with deploying AI in autonomous weapon systems. Explore the challenges of assigning responsibility and accountability for lethal decisions made by machines.
- **AI in Surveillance and Intelligence:** Examine the ethical implications of AI-enabled surveillance and intelligence gathering in military contexts, focusing on balancing national security with individual privacy and civil liberties.
- **Conflict Escalation and Risk of Unintended Consequences:** Explore how AI technologies may unintentionally escalate conflicts or trigger unforeseen military engagements. Discuss the ethical responsibility of nations and developers in preventing harm and ensuring proportionality.

6. AI in Healthcare and Medical Decision-Making

- **Ethical risks of AI-powered diagnostics:** Examine the potential consequences of AI making medical predictions or diagnoses, including misdiagnoses, overreliance on AI outputs, and unintended harm to patients. Discuss how ethical principles like non-maleficence and beneficence apply.
- **Bias in medical datasets affecting patient outcomes:** Investigate how biased datasets can lead to disparities in healthcare delivery, misdiagnosis, or unequal treatment across demographics, genders, or ethnic groups. Highlight the importance of representative datasets and continuous evaluation.
- **Patient consent, transparency, and trust:** Discuss the need for informed patient consent when using AI-driven tools, transparency in AI decision-making, and building trust between patients, clinicians, and AI systems.
- **Regulating AI in clinical environments:** Explore national and international regulatory frameworks for AI in healthcare, such as FDA guidelines, EU AI Act, and data protection laws, focusing on ensuring safety, accountability, and ethical use.

7. AI in Governance, Elections, and Public Policy

- **Deepfakes and political misinformation:** Analyze the ethical concerns surrounding AI-generated media used to manipulate public opinion, spread false information, or disrupt democratic processes.
- **Ethical risks of algorithmic governance:** Explore the dangers of relying on AI systems for

public decision-making, including opaque decision processes, lack of accountability, and potential biases in policy enforcement.

- **Threats to democracy and public trust:** Discuss how misuse of AI in governance can undermine citizen trust, erode democratic norms, or centralize power in opaque ways.
- **Policies for secure and transparent civic AI:** Examine the role of ethical guidelines, legislation, and civic oversight in ensuring AI applications in governance are transparent, accountable, and respect citizens' rights.

8. AI and Environmental Sustainability

- **Carbon footprint of training and deploying large models:** Highlight the environmental impact of developing, training, and running large AI models, including energy consumption and greenhouse gas emissions.
- **Ethical trade-offs between innovation and environmental cost:** Discuss the tension between rapid AI innovation and ecological responsibility, emphasizing the moral obligation to balance technological advancement with sustainability.
- **Sustainable AI design strategies:** Explore methods for reducing environmental impact, such as model optimization, energy-efficient hardware, and green software practices.
- **International efforts on "Green AI":** Examine global initiatives promoting sustainable AI, such as international collaboration, policies for eco-friendly AI research, and standards for carbon-conscious AI development.

9. AI Surveillance, Facial Recognition & Civil Liberties

- **Mass surveillance and human rights concerns:** Analyze the ethical and legal implications of AI-enabled mass surveillance on privacy, freedom of expression, and civil liberties.
- **Real-time facial recognition in public spaces:** Examine the potential for misuse of facial recognition technology in monitoring citizens, profiling, or discriminatory enforcement.
- **Consent, transparency, and misuse by corporations or governments:** Discuss the need for explicit consent, public transparency, and accountability in deploying AI surveillance tools, and the risks when these are ignored.
- **Balancing safety with civil liberties:** Explore strategies for maintaining public safety using AI technologies while safeguarding individual freedoms and legal rights.

10. AI in Finance, Credit Scoring, and Fraud Detection

- **Ethical implications of automated loan approval:** Discuss how AI-driven credit decisions can affect individuals' financial lives, potentially creating unfair advantages or disadvantages.
- **Risk of financial exclusion due to biased data:** Examine how historical biases in financial data can lead to unequal access to loans or services for certain populations.
- **Transparency in algorithmic credit scoring:** Highlight the importance of explainable AI in financial decision-making to ensure accountability and fairness.

- **AI fairness in fraud detection and risk analysis:** Explore how AI systems can detect fraud efficiently without unintentionally penalizing legitimate users, and discuss ethical trade-offs between risk mitigation and fairness.

Additional Requirement for All Topics

For your assigned topic, you are required to:

- Discuss relevant **national and international initiatives** aimed at promoting ethical AI, such as UNESCO guidelines, OECD principles, the EU AI Act, NIST AI RMF, and other applicable national policies.
- Propose a **generic ethical AI framework** that can be applied to your topic. Your framework may include key principles such as:
 - **Fairness** – ensuring unbiased decision-making and inclusivity
 - **Transparency** – explainable and understandable AI processes
 - **Human Oversight** – maintaining meaningful human control over AI systems
 - **Sustainability** – environmentally and socially responsible design
 - **Accountability** – clear responsibilities for AI outcomes and decisions

5. Discussion / Personal Reflection (150–250 words)

In this section, provide a personal reflection on your research and findings. You may consider the following points:

- **Why ethical AI matters:** Reflect on the importance of integrating ethics into AI development and deployment, considering both societal and individual impacts.
- **What you learned from your research:** Summarize key insights, challenges, or new understandings gained from analyzing your assigned topic.
- **Responsible AI for safer and inclusive development:** Discuss how adherence to ethical principles can guide AI to be safer, more equitable, and beneficial for diverse communities.
- **Broader implications for society:** Reflect on the potential long-term societal effects of ethical versus unethical AI deployment, including benefits and risks.

Note: Your reflection should be written in your own words and be approximately 150–250 words in length.

6. References:

- Use APA or Harvard referencing style.
- Minimum 6–8 credible sources (academic papers, policy documents, reputable reports).

"No web pages."

4 Evaluation Criterion and Grading Rubric:

Note: This assignment contributes 10% toward the final course grade.

Component	Criteria	Weight (%)
Abstract	Clear, concise summary of purpose, key issues, and findings; within word limit	10%
Introduction	Identifies major ethical issues; provides context and ethical principles/frameworks; logical setup	20%
Thematic Review (Main Section)	Accurate understanding & critical analysis; relevant examples; discussion of initiatives; original ethical AI framework	40%
Discussion / Reflection	Clear reflection on importance of ethical AI; connection to findings	15%
Writing Quality & Referencing	Academic clarity, organization, grammar; proper citations and referencing	15%
TOTAL		100%
